

## W06-P1: Use DevTools to exam useState values

The screenshot shows the initial state of the 'Grocery Bud' application. On the left, the VS Code editor displays the `App_66.js` file. The `useState` hooks are highlighted with red boxes: `const [name, setName] = useState('');`, `const [list, setList] = useState([]);`, and `const [alert, setAlert] = useState({ show: false, msg: '', type: '' });`. The `handleSubmit` function is also highlighted, showing the logic for updating the state. On the right, the browser shows the application running at `localhost:3000/?`. The form has a text input with the placeholder 'e.g. eggs' and a 'Submit' button. The DevTools Components panel shows the state of the application, with the `State` object highlighted in red: `{ msg: 'please enter value', show: true, type: 'danger' }`.

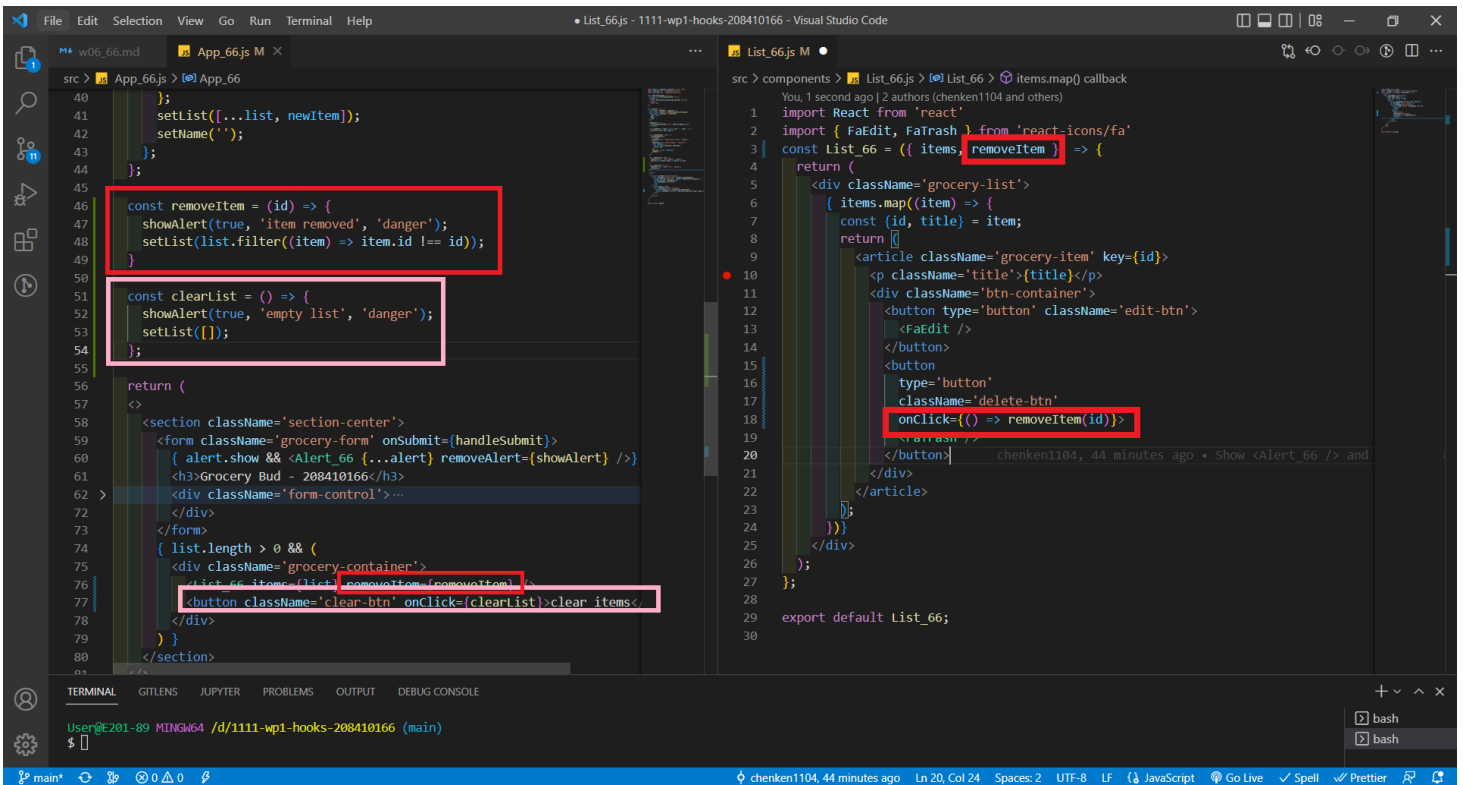

## W06-P2: Show <Alert\_66 /> and <List\_66 />

The screenshot shows the updated state of the 'Grocery Bud' application. On the left, the VS Code editor displays the `List_66.js` file. The `items.map` function is highlighted with a red box, showing the logic for rendering the list of items. On the right, the browser shows the application running at `localhost:3000`. The form has a text input with the placeholder 'e.g. eggs' and a 'Submit' button. Below the form, the list of items is displayed: 'Apple', 'Cheese', and 'Eggs'. Each item has a green checkmark and a red trash icon. The DevTools Components panel shows the state of the application, with the `items` array highlighted in red: `[{ id: '1665577904581', title: 'Apple' }, { id: '1665577910853', title: 'Cheese' }, { id: '1665577917423', title: 'Eggs' }]`.

## W06-P3: Using localStorage to save list data

## W06-p4: Add function for removing item and clearing list

## W06-logs: show all four logs done today
